

Personal hygiene for owners and tenants

## **NEW: Geberit Balena 6000 – Adaptable shower toilet seat**

Geberit International AG, Jona, March 7, 2007

**With its range of shower toilets, Geberit has revolutionized the experience of going to the lavatory. The secret has now spread beyond medical and wellness experts: water cleans more thoroughly and gently than paper. As a follow-up to the premium Balena 8000 product, a top modular model has also been available since 1 January 2007. The new Balena 6000 combines all the functions of a modern shower toilet and provides the highest levels of well-being in personal hygiene. It supersedes the former Balena 5000 seat and the old Balena 6000.**

The new Balena 6000 will convince you with its high-quality workmanship and materials, something that can by no means be taken for granted when it comes to shower toilets. The compact seat pampers you with warm showering water, a pleasant warm air dryer, air purification and numerous additional functions. The moving spray arm and the pulsating massage spray ensure particularly thorough cleaning. The gentle Lady shower can be selected especially for cleansing the sensitive female genital area.

### **Multiple functions combined with design**

Equipped with a practical remote control, automatic nozzle cleaning and a lid with an automatic lowering function, the Balena 6000 satisfies all the requirements for a multifunctional shower toilet. In addition, this virtuoso product looks great. Its compact external dimensions, clear and ergonomical control panel and elegant design allows this adaptable shower toilet seat to harmonies with every bathroom environment.

### **Ideal for rented apartments or subsequent installation**

The new adaptable shower toilet seat is available in four attractive colors and can be rapidly mounted on any existing toilet as a retrofit. It fits onto almost any ceramic appliance in a straightforward procedure that involves replacing the seat and lid. And when the tenants move house, the Balena 6000 simply moves with them.

### **The dawn of a new toilet culture**

In contrast to many other countries such as Japan or Switzerland, Germany is still a developing country when it comes to intimate hygiene. At the same time, water is an everyday resource – and yet so precious. For as long as anyone can remember, water has been part of any cleansing ritual. Cleaning with fresh water at body temperature is gentler, more hygienic and more thorough than conventional cleaning with paper.

**Captions:**
